

Wakatek

Solar Power-Electrical Power-Hardware

**THE FUTURE
OF SOLAR IS
NOW**

Let me tell you something

About Wakatek

Wakatek is one of the top commercial solar energy companies in the nation with a proven record of over 500 successfully completed projects all over Zimbabwe. We install solar PV plants anywhere in Africa as well as providing mechanical mounting services for ground and roof tops photovoltaic power plants.

We offer high-quality services and competitive pricing of solar products and irrigation pumps. Wakatek Solar is one of the giants in supplying and installing solar irrigation systems, DC and AC submersible pumps, drip irrigation systems, Jojo Tanks and tank stands.

We are aiming for each and every household in Zimbabwe to transition from the reliance on the nation grid to a more sustainable energy source. Solar energy will play a key role in creating a safe, reliable energy and household independence.

Project House

GREENHOUSE

Wakatek

Solar Power-Electrical Power-Hardware

Practice agriculture in a

GREENHOUSE

GABLE TYPE

Greenhouse Structure.

This refers to greenhouse with a traditional gable construction, with straight walls and sloping roofs that create a triangular gable on either end of the structure. Its advantage is that it is spacious for plants and headroom, and promotes air circulation.

**GREEN
REVOLUTION**

GOTHIC ARCH

Greenhouse Structure

This type of greenhouse is a hybrid of gable-style and A-frame. The walls are framed with aluminum or steel poles that curve gracefully to join with a ridge cap and form a pointed roof. Its advantages is that it has fewer material, is lower in cost and has good runoff for snow and water.

Other types of Greenhouse structures.

- *Saw tooth*
- *Hoop tooth*
- *Geodesic dome*
- *Uneven span*
- *Lean doom*

GREENHOUSE *Recommendations*

Farmers using Greenhouses can apply the following ideas:

- Ensuring proper ventilation and air circulation through features like windows, vents and fans is highly recommended.
- Considering use of renewable energy sources (e.g Solar) to power greenhouse systems.
- Use of recycled and sustainable materials when possible.
- Incorporate rainwater harvesting and grey water reuse systems
- Implement a climate control system to regulate temperature, humidity and light.
